**Final proposal – Sketch control.**

For this final project I get inspire by the Etch A Sketch which was consider a mechanical screen drawing toy. I want to use the knob as the interactive part of the project in where the values that the potentiometer show it will get translate to the processing sketch and "will draw" something in the computer screen. I also want to add a button to make it as a switch light in the processing sketch.

Materials

1. Arduino
2. Potentiometer
3. Button
4. Cables
5. Box
6. Tape
